THE LATEST IN BLACK CARBON AND BIOAEROSOL INSTRUMENTATION

SP² **X^R**

SINGLE PARTICLE SOOT PHOTOMETER
EXTENDED RANGE

ACCURATE, REAL TIME, SIZE RESOLVED
SINGLE PARTICLE MEASUREMENTS OF
BLACK CARBON

The SP2-XR is one of two (SP2-D, Droplet Measurement Technologies) instruments in the world that directly measure black carbon in individual aerosol particles. The SP2-XR's unique design is compact and portable making it an ideal monitoring device. Its high sensitivity, fast response and specificity to absorbing aerosols along with its straightforward data analysis make it the premier instrument for researchers interested in black carbon.

APPLICATIONS:

- » Atmosphere and climate research
- » Monitoring networks
- » Air quality
- » Biomass burning
- » Combustion emissions

WIBS[•]NEO

WIDEBAND INTEGRATED BIOAEROSOL SENSOR

NEW ELECTRONICS OPTION PROVIDES
DETAILED INFORMATION ON ATMOSPHERIC,
AIRBORNE BACTERIA, MOLDS, AND POLLEN.

The Wideband Integrated Bioaerosol Sensor New Electronics Option provides highly sensitive measurements of mold and other bioaerosols. The instrument uses a UV xenon source to excite fluorescence in individual particles. Unlike UV lasers, the UV xenon source allows for the precise selection of particular excitation bands. These wavebands have been selected to optimize detection of common bioaerosols (tryptophan and NADH.)

APPLICATIONS:

- » Bioaerosol research (mold, pollen, fungi)
- » Air quality studies
- » Health effects research
- » Suitable for airborne or ground-based sampling

INTERNATIONAL AEROSOL RESEARCH ASSEMBLY

(www.iara.org)

The International Aerosol Research Assembly (IARA) is an organization consisting of national, regional and special interest aerosol research associations. IARA is to promote scientific knowledge and cooperation in the field of aerosol research internationally, to select a host organization for the international aerosol conference held every four years, to recognize prominent aerosol scientists with the Fuchs memorial award every four years and the International Aerosol Fellow award every two years. IARA is guided by a Board consisting of representatives from each member association and a leadership team elected by the Board.

The International Aerosol Research Assembly (IARA) was first discussed at the First International Aerosol Conference in Minneapolis, MN, USA in 1984 and the Assembly was formally organized at the Second International Aerosol Conference in West Berlin, Germany, in 1986. The founding members were American Association for Aerosol Research (AAAR), Gesellschaft fuer Aerosol Forschung (GAeF) and the Japan Association for Aerosol Science and Technology (JAAST).

The Following are Member Associations of IARA:

MAGEE SCIENTIFIC: PRESENTATION OF NEW INSTRUMENTS FOR THE ANALYSIS OF CARBONACEOUS AEROSOLS | Room 123

Magee Scientific is the originator and developer of the Aethalometer, the instrument most-used in the world for the real-time measurement of aerosol BC. The Model AE33 Aethalometer provides speciation and source apportionment of “Black” (diesel) versus “Brown” (biomass) carbon with a time resolution as rapid as 1 second.

Our new instrument is the Total Carbon Analyzer, model TCA08. This provides a continuous analysis of the TC content of aerosols with a time resolution as rapid as 15 minutes. It links to the AE33 to provide real-time EC/ OC data. A significant advantage for field or monitoring applications is that the TCA contains NO FRAGILE GLASS, and requires NO SPECIALIZED GAS SUPPLIES.

We shall demonstrate these instruments in a hands-on session conducted by the instrument developers themselves, together with our support staff.

LPDMA

Low-Pressure Differential Mobility Analyzer

The differential mobility analyzer (DMA) is a device which classifies the size of particles according to their electrical mobility. R-DEC's LPDMA can continuously classify monodisperse nanoparticles (2 -50 nm) generated in low-pressure (> 200 Pa) by connecting to a Laser ablation device or an ion beam source, etc.

The LPDMA classifies nanoparticles according to their electrical mobility.

This device was developed by the National Institute of Advanced Industrial Science and Technology (AIST).

Aerodynamic Aerosol Classifier

Classification of aerosol particles by their *aerodynamic diameter*

- Alternative to DMA
- True monodisperse aerosol selection
- Generate calibration aerosol – ideal for optical instruments

- No charger or neutralizer needed
- Free from multiple charging artefacts
- Wide particle size range (25nm to $>5\mu\text{m}$)
- High transmission efficiency

AAC Instrumentation Tutorial:
Sunday: 1:30 – 3:10PM
"Hands-On Aerosol Instrumentation Design & Measurement - Group A"

Centrifugal Particle Mass Analyzer

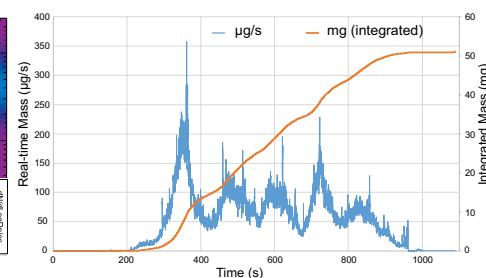

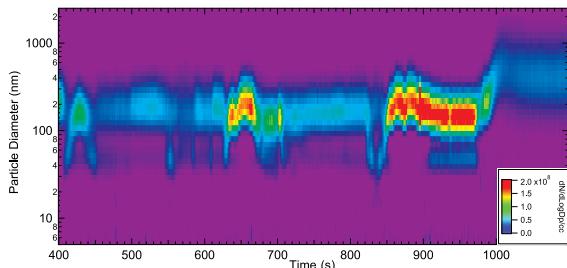

- Classify aerosol particles by mass: charge ratio
- Forms an aerosol mass standard
- Determination of particle density and morphology
- High particle throughput at high resolution due to unique design

Meet Cambustion
at Booth 14&15

Real-time Aerosol Size Distributions

- Particle measurement from 5nm to $2.5\mu\text{m}$
- 10 Hz data, $T_{10-90\%}$ response time from 200 ms

Size/number spectra & mass emissions from meat cooking

Unipolar Charger

- Uses a corona discharge to place a high level of charge on an aerosol
- Use with the CPMA as part of an aerosol particle mass standard

Smoking Machine

- Flexibly reproduce a variety of smoking topographies, including real-world
- Compatible with tobacco, electronic cigarettes, heat-not-burn
